

1) Pressure Belts

- Low at equator

- H + L alternate at $0^\circ, 25^\circ, 60^\circ, 90^\circ$

2) Winds

- $H \rightarrow L$

- Northern Hem. = CW

South. Hem. = CCW

3) Ocean Currents

- Same direction as winds

- Split when hot land

~~Water leaving equator is warm~~
~~Water approaching equator is cold~~

- water coming from equator is warm

- water coming from far from the equator is cold.

4) Major Rainforest + Desert

- $(L) \rightarrow$ Rainforest $(H) \rightarrow$ Desert

- Rainforest is bigger on the warm water side.

- Deserts don't touch the warm water side.
